SUPERIOR MARSHALL STRAWBERRY—

For Description Refer to Catalog

50 Plants for \$2.50; 100 for \$4.50; 1000 for \$30.00

STRAWBERRIES: Everbearing and New Varieties—

Streamliner—	25	50	100	1000
(New)	\$2.50	\$4.25	\$8.00	\$60.00
Minnesota 1116 (Evermore)				
New	1.50	2.50	4.00	30.00
Rockhill No. 26				
10 for	\$1.50	3.00	4.50	8.00
Giant Gem	1.50	2.50	4.00	30.00

The Streamliner strawberry is one of the most outstanding of the new varieties. Fruit very large and attractive, deep red in color, firm in texture, with a delicious sweet flavor. Ripens about the same time as the Marshall. New plantings with reasonable care will begin fruiting about first of July and will continue until frosty weather in the late fall.

The Streamliner originated in the Mountains of Northeastern Oregon at an altitude of 3,000 feet, where winter temperatures fall 20 to 30 degrees below zero, therefore is extremely hardy.

THORNLESS BOYSENBERRIES

Plant Thornless Boysenberry for Greater Profits

Berries ripen from 10 days to 2 weeks earlier than the thorny type, yield from 5 to 8 tons per acre, come in on the early market, insuring the grower of top prices.

At prices paid the past season, approximately \$400.00 per ton, this gives a gross income of from \$2,000.00 to \$3,000.00 per acre. And think of the satisfaction of training the vines on the wires, and picking the fruit without being stuck by thorns.

The following are reports received on plants supplied to two of our growers who made large plantings winter and spring of 1945.

Sherwood, Ore., Oct. 1, 1946

"In reply to your inquiry regarding the Boysenberry crop we had this year, they produced a wonderful crop. We did not put the vines on the wires until early spring, that way we reaped the first harvest off the young plants that grew on the tips. Then the Boysenberries that the old plants produced were nice, large berries and sold at top prices at the East Side Market. In fact, if you read the Portland Journal you will remember I sold the first Boysenberries on the market. I am well satisfied with the quality. In fact there are a few thorny ones mixed in with mine and the thornless are just as nice quality as the others, and oh the satisfaction of picking berries without thorns is a worth a million."

Newberg, Ore., Nov. 30, 1946

"The thornless Boysenberry plants I got from you 2 years ago, made a wonderful growth. Vines are stronger growers than the thorny type, and so far as I am able to ascertain by comparison, produce heavier crops than the thorny type. Also the berries ripen about two weeks earlier than the thorny vines, which is a big advantage, as the crop matures while there is abundant moisture in the ground, besides can always count on top prices for the early market, and as well a ready outlet to the canneries and processing plants. Unnecessary to tell you how much I appreciate training the vines and picking the berries without thorns."
